## A. Site License Installation Overview

The eVSM Software is an add-on to Microsoft Visio. The software allows users to capture, analyze, and improve the value stream. Map capture is made easy with drag & drop from a complete library of standard value stream mapping icons. The analysis function is automated and facilitates exploring what-if scenarios. The improve capability highlights the waste and helps prioritize improvement ideas.

This document outlines the installation of the eVSM Software, license administration, and new user certification.

Here are steps to getting eVSM running.

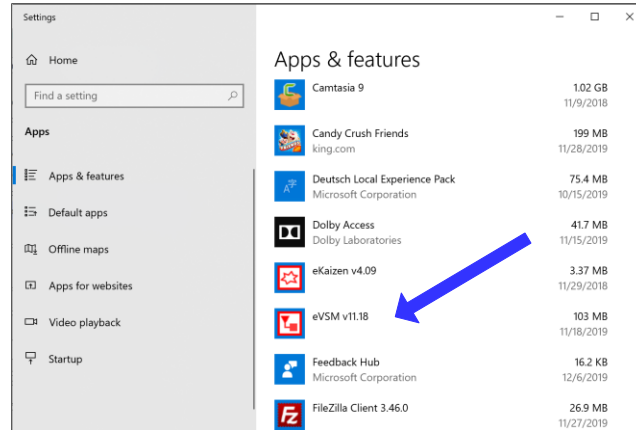

## B. Check Pre-requisites for eVSM v12

- Windows 7/8/10, Excel 2013/2016/2019, Visio 2010/2013/2016/2019, 32/64bit
- Mouse with scroll wheel
- Screen size 1366x768 minimum recommended

## C. Un-install any older versions of eVSM

Only one version of eVSM can be installed per PC. Un-install any older versions of eVSM from your PC. Check “Start > Control Panel > Apps & Features”

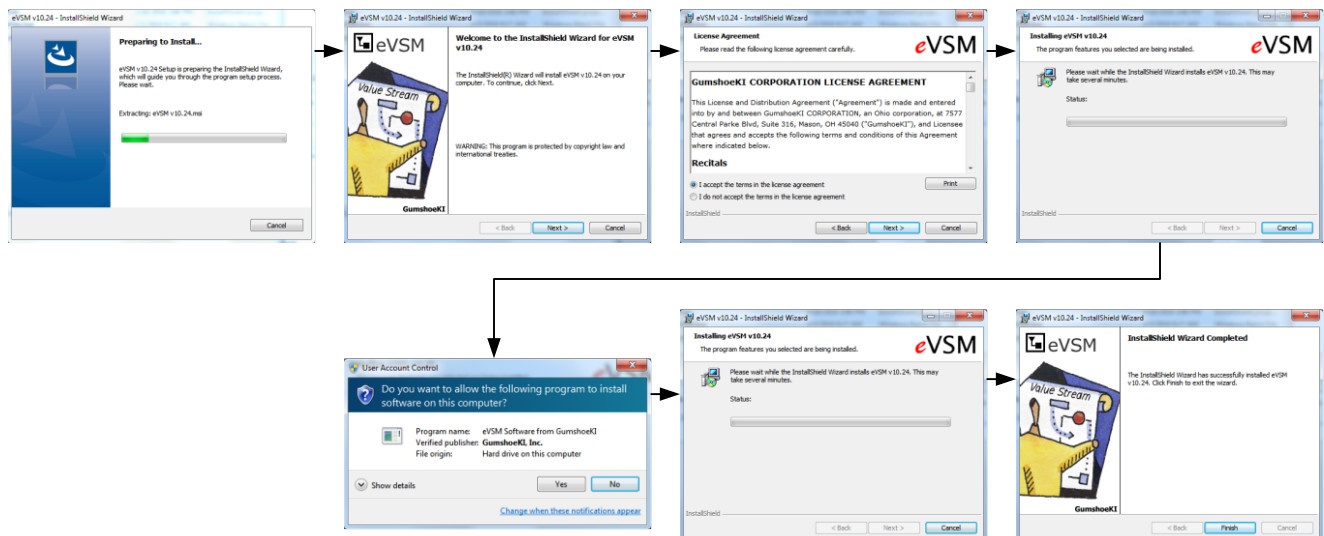

## D. Download/Install eVSM v12

The latest version of the installation kit can be obtained from the eVSM Download center at <https://evsm.com/install>

## E. Install eVSM v12

Run the downloaded setup.exe and follow the prompts. You may need temporary admin privileges to complete this step.

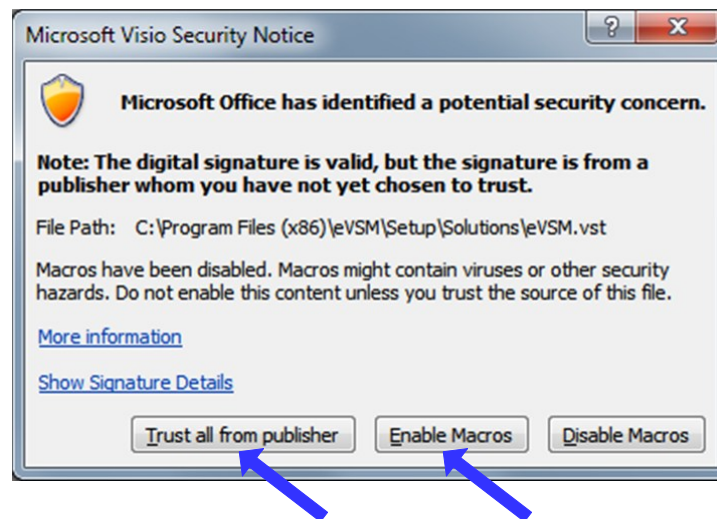

## F. Start eVSM

Click the Start eVSM icon on the Desktop. There is also a Start eVSM shortcut available in the Windows Start menus under “Start>Programs>eVSM Software”.

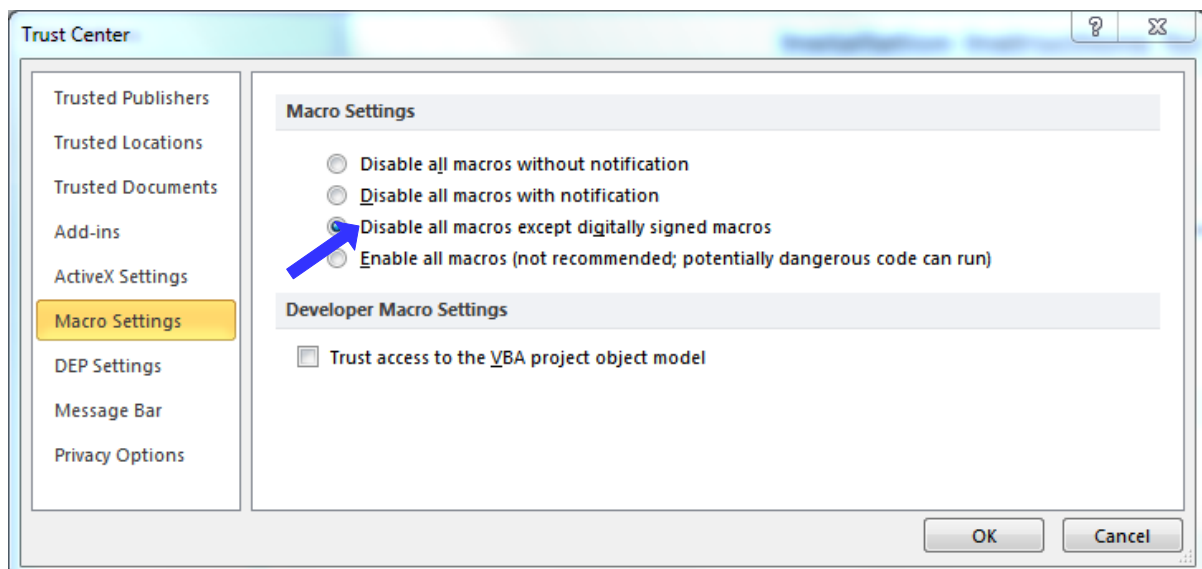

Start eVSM

VBA macros need to be Enabled for eVSM to run. If you see a message similar to the following, click the “Enable Macros” button. You can also check the “Trust all from publisher” button to avoid seeing this message in future.

If macros are not enabled and a message similar to the above does not display, then the Visio macro security needs to be lowered through “File > Options > Trust Center > Trust Center Settings” as shown below.

## G. Create a User Account at evsm.com

Each user must have a login account at evsm.com. This is necessary for license activation as well as for learning and certification. New users can create an account at <https://evsm.com/user/register>.

**Login to your eVSM Account**

If you don't have an existing account, please [create a new one](#).

**E-mail \***

**Password \***

**Sign in**

[Forgot password?](#) [Create a new account](#)

## H. Activate License

For the automatic activation to work, the client PC must be connected to the internet and be able to access the eVSM web server.. Each user, starts eVSM, logs in, and activates eVSM with your site key:

**eVSM License Manager**

eVSM (TM) version 11.19

Your temporary license has expired. If you have purchased eVSM, please activate your license by clicking the "Activate License" button below.

**Activate License** **Buy eVSM** **Exit eVSM**

**Activate License**

eVSM.com Account **Sign In**

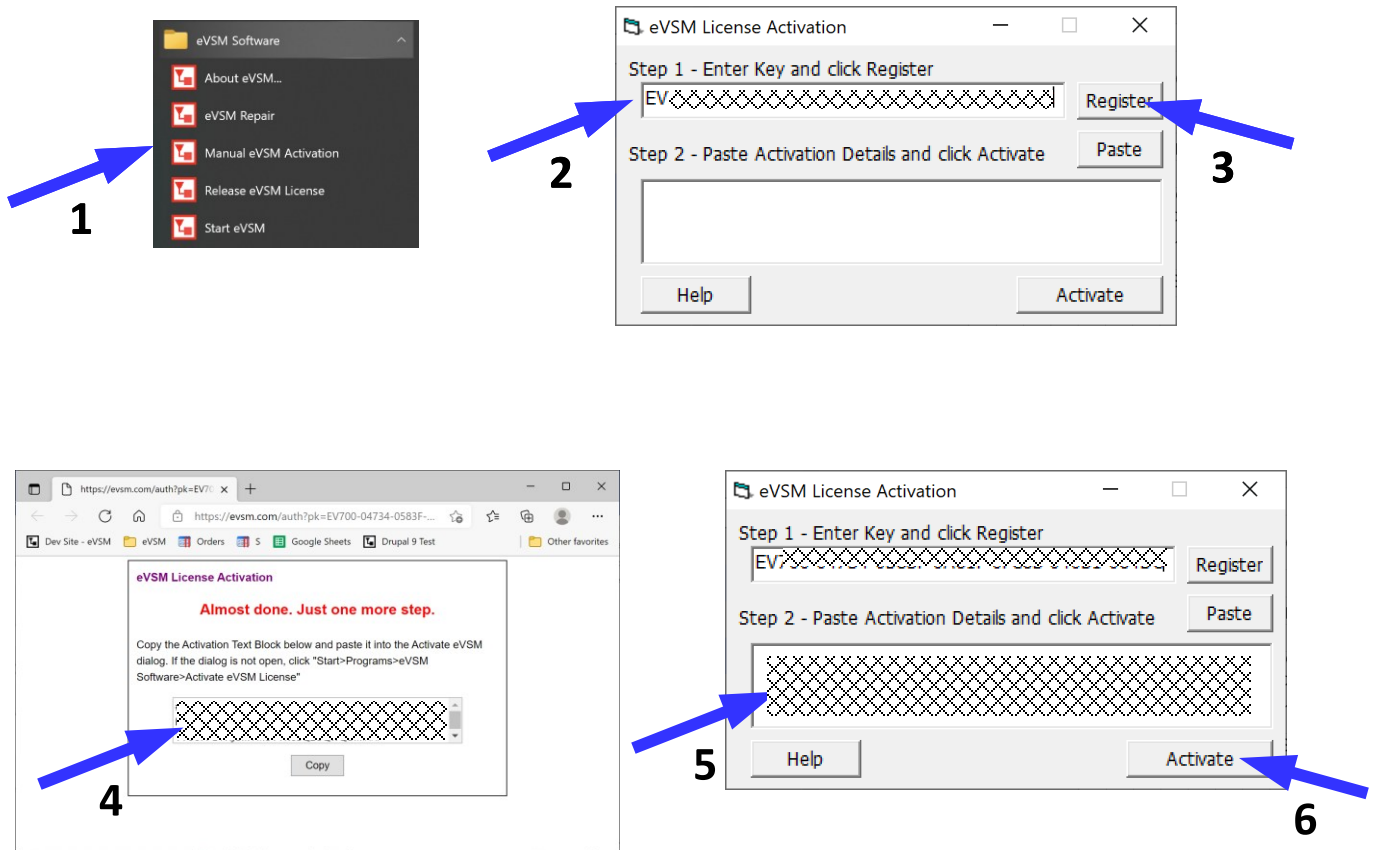

Enter Key

**Activate**

## I. Manual License Activation

This method of activation is provided in case the company firewall or proxy server blocks communications between the eVSM software and the eVSM web server. It can actually also be used if there is no internet connection on the client PC.

In the Windows Start menus, click “Start>Programs>eVSM Software>Manual License Activation.

1. Open the manual activation dialog from the Windows Start menus.
2. Enter the product key
3. Click the Register button. A browser window will open.
4. Copy the activation string in the text box
5. Paste the activation string
6. Click the Activate button

## J. Remote License Activation (RLA)

eVSM RLA allows remote activation of a license through a Windows or VBScript.

To use this function:

1. The eVSM Software must first be installed on the client PC
2. Must have a valid product or site license key
3. Admin privilege login for the client PC
4. A login account at <https://evsm.com> for the end-user

### Command to activate:

AbouteVSM.exe -activate *ProductKey* -email *EmailAddress* -token *SecurityToken*

where:

Pathname = Path to the eVSM installation Resources folder, eg. "C:\Program Files\ eVSM\Setup\Resources\AbouteVSM.exe"

ProductKey = A valid eVSM license product key

SecurityToken = This is the "token" displayed in the <https://evsm.com/user> after the user is logged in.

Example:

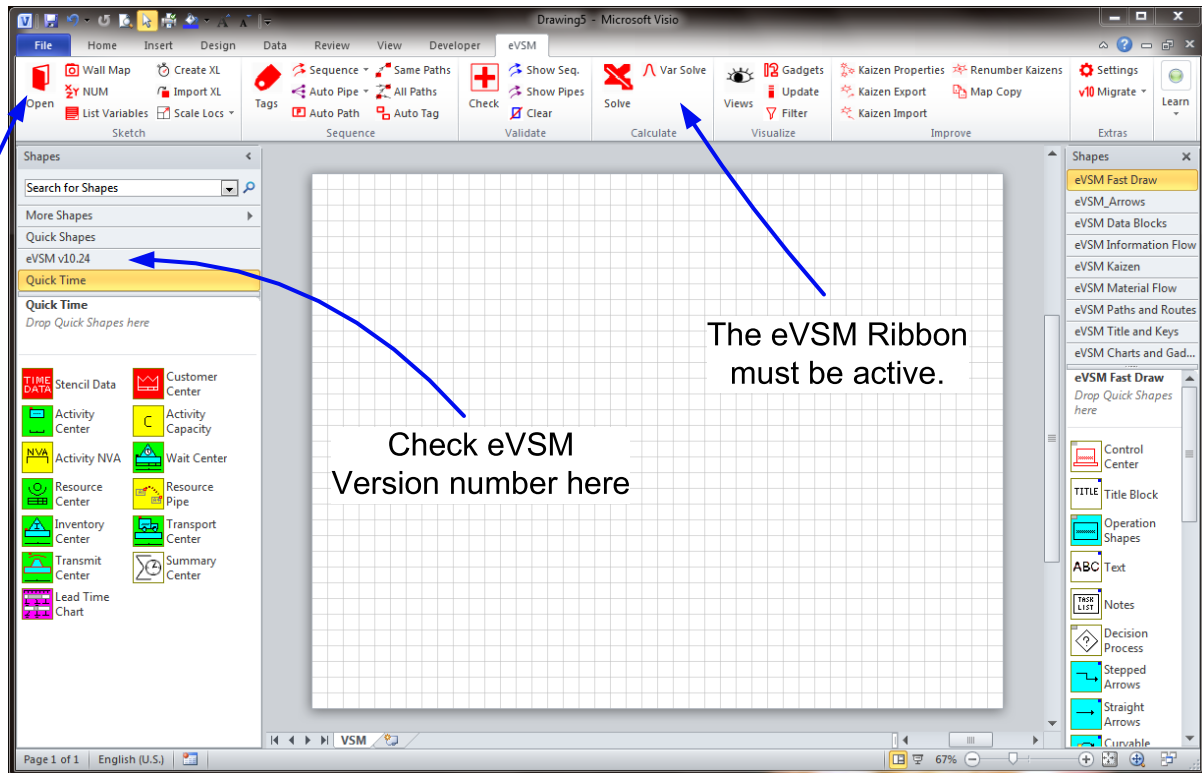

```
"C:\Program Files\eVSM\Setup\Resources\AbouteVSM.exe" -activate EV800-STXXX-XXXXX-XXXXX-XXXXX-XXXXX -email joe.blogs@domain.com -token XXXXXXXXXXXXXXXXXXXXXXXXXXXX
```

Note: All hyphens (-) must be included. Also, the pathname will need to be adjusted for your windows and language environment.

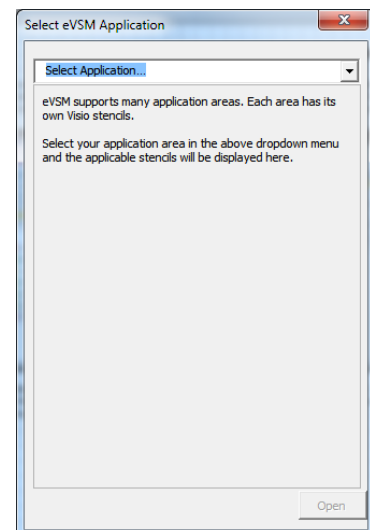

The above line can be executed from your company installation scripts, or a separate stand-alone windows script, or even typed in from a DOS command prompt.

## K. Verify Successful Startup

A successful start up of eVSM should result in a view similar to below. The main thing to look for is the eVSM ribbon at the top. If the ribbon does not display then eVSM has not started properly. Trouble-shooting help is available at <https://evsm.com/nobuttons>.

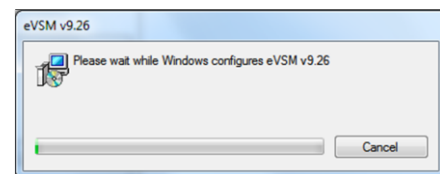

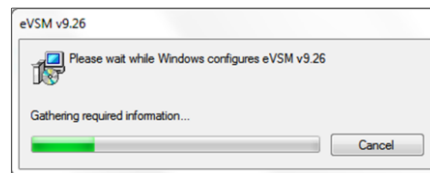

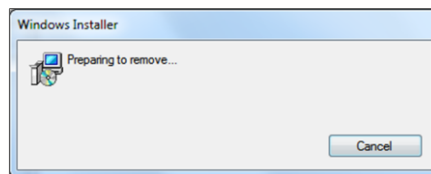

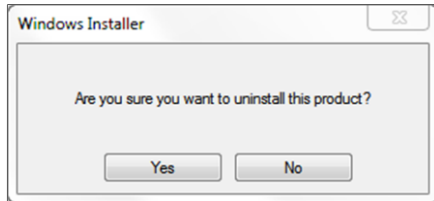

Further verification of a successful install and startup can be performed by clicking the first button (labeled "Open") on the left in the eVSM Toolbar. This should open a dialog box similar to shown here allowing the user to select stencil for type of map they wish to draw.

## L. Un-install eVSM v12

eVSM can be un-installed via the Add/Remove Programs (control panel Programs and Features) dialog, or with the shortcut provided at “Start>Control Panel>Apps & Features” :

## **M. License Transfer**

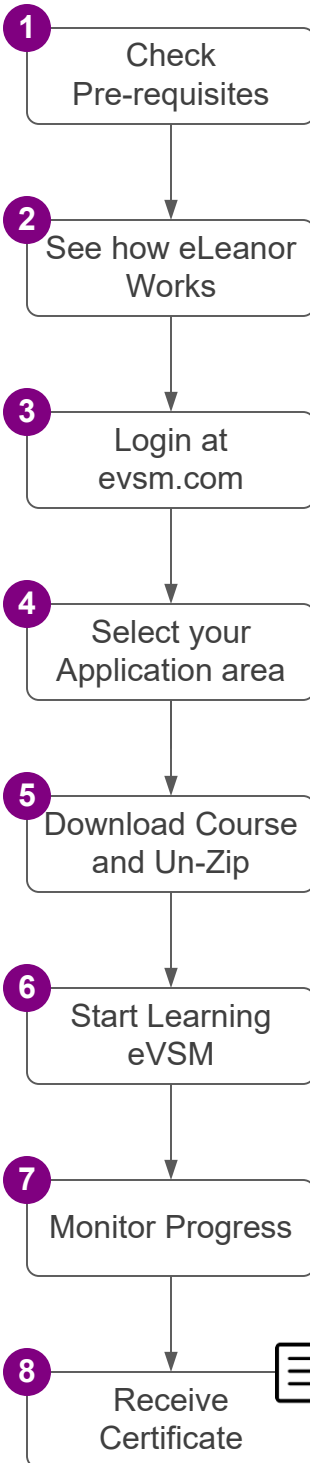

The site-license may be used by any employee of the entity (site, division, or enterprise).

There is a maximum number of PCs agreed for the entity. If this limit is reached and you need to free up some of the licenses for re-deployment, please send the Email addresses of the currently activated users you wish to release to [support@evsm.com](mailto:support@evsm.com) requesting a license release. This may be necessary also in the event of a lost or de-commissioned PC.

## **N. License Management**

The eVSM server keeps track of activations and stores the computer ID's. Provided each activation is done with a unique user login account, eVSM Support can provide a list of users and activation dates.

## O. eLearner – Getting Started Checklist

- Windows 10/11, Excel 2013 or later, Visio 2013 or later
- Mouse with scroll wheel
- Un-install any older versions of eVSM
- Install latest version for eVSM from <https://evsm.com/install>

- Watch the video (5 min) at <https://evsm.com/VidFirstUsageofEleanor>

- Log in at <https://evsm.com>
